Oil Test Set

DETAILED SPECIFICATION OF OIL TEST SETS

Oil test is an equipment designed to test the dielectric strength of insulating oils as per relevant specifications vis. IS 6972 It is a useful equipment for transformer / switchgear manufacturing units. oil filtering agencies, repair shop and electrical maintenance departments.

SPECIFICATION:

Input : 220/230 AC, 1Phase, 50 Hz.
Output : 0-60/75/100 KV, centre tap earthed
Capacity : 1KVA
Indication : Mains 'ON' and HT 'ON' Lamps
Metering : ^{9.6}72 sp. mm. back of panel mounting, moving coil rectifier type AC, Voltmeter to monitor output voltage
Protection : Electronic, fast action over-current tripping device sensing HT Current directly

SAFETY FEATURES:

- 1) Zero Inter-locking arrangement
- 2) A transparent hood (cover) on test cup with a door interlocking micro switch
- 3) Resin encapsulated HT transformer
- 4) The test cell is made from transparent high impact Acrylic sheet which enables the operator to observe the flash over of the oil under test

CONSTRUCTION:

It is in portable Air Cooled Sheet metal casing with Powder Coating, consists of control cubical and H. T. transformer

ACCESSORIES:

- 1) 'GO' and 'NO GO' Gauge
- 2) Test cell
- 3) Instruction manual

OPTIONAL :

- 1) Motorised version is also available with motorised cum manual options
- 2) Magnetic Stirrer Facility is also available on request

Our policy is one continuous product development and the right is reserved to supply equipment which may vary slightly from that described.
