Authorized Distributor of SHRIKFAST Innovators In Heat Tools (USA)

The Shrinkfast® Model 998 is the leading heat tool for both shrink-wrapping and shrink-film processing. When time is of the essence the power of the 998 will get the job done – quickly and efficiently.

UL Approved (UL Guard Not Pictured)

MODEL 998 FEATURES AND BENEFITS

**The advantages of shrink-wrapping with shrink-film
and the patented Shrinkfast® Heat Tools**

Powerful: Offering 15% more power than its leading competitors, the model 998 will shrink the toughest jobs more quickly and economically. With 212,000 BTUs of power, a person can shrink-wrap a 40" x 48" x 60" pallet in less than 2 minutes.

Lightweight: With its sleek design and weighing only 2.2 lbs., the 998 is perfectly balanced for operator comfort. The 998's ergonomic design and fan shaped combustor lead to an even and steady heat pattern for consistent shrink-wrapping.

Safe: With its UL™ listing, the 998 is designed to handle the toughest industrial jobs with several built-in safety mechanisms: A "dead man" trigger is designed to automatically shut off the flame once the trigger is released. Also, the Shrinkfast® patented combustion cycle allows the flame to burn outside the nozzle, which remains cool to the touch, even after extensive use. In addition, the regulator has an automatic safety POL that shuts off the propane supply in case the hose gets cut or develops a leak.

Flexible: When shrink-wrapping large equipment or difficult to reach areas, the Shrinkfast® integrated extension system provides unlimited shrinking possibilities. With a 2', 4', or 6' extension available, no job is too big for the model 998.

Durable: The 998 comes with a full 1-year manufacturer's warranty on all parts and labor. Shrinkfast® also offers a full service repair facility that can answer any technical question and rebuild any Shrinkfast® heat tool or extension.

Versatile: Shrink-wrapping results in a five-sided protection from the elements. Shrink film also produces a stronger bond than either stretch-wrap or banding. This additional protection is critical during the transportation and storage of everything from those odd-shaped pallets to large industrial equipment.

Shrinkfast® Marketing has been manufacturing heat tools for over 35 years. Their patented technology offers customers the power and flexibility to heat virtually any job at a fraction of the cost compared to other stretch film options. Here are just a few of the many ways Shrinkfast® customers are utilizing the world's leading heat tool:

Lengths & Weights (*weight includes heat tool*)

2' – 4 lbs

4' – 5 lbs

6' – 6 lbs

– Quick push button disconnect/connect

– Standard Arm Assist Clip for shrinking large jobs and “one handed operation”

– 75 degree angle of combustor for shrinking curved surfaces
