

Festoon system are generally used on, overhead cranes for the transmission of power & control cables for cross bridge trolley travel. But they can also applied to crane runway travel other application for festoon system are transfer cars, Monorails refuse cranes, waste water treatment machine & other material handling applications.

Festoon system capacity is up to 50 kg of cable /meter

Light in weight, easy to install, smooth movement less friction, trolley weight is less, life of cable increases as no unwanted twist turns, in case of bearing failure trolley will never fall down.

Festoon System

SILVERLINE Festoon Systems guides electrical power.FESTOON SYSTEM which we provide is always according to the convenience of that particular design of a crane or machinery including standard cranes and several others etc. It is used on overhead cranes for the transmission of power & control cables for cross bridge trolley travel. The capacity of our Festoon System is up to 50 kg of cable /meter. But they can also applied to crane runway travel other application for festoon system such as transfer cars, Monorails refuse cranes, waste water treatment machine & other material handling applications.

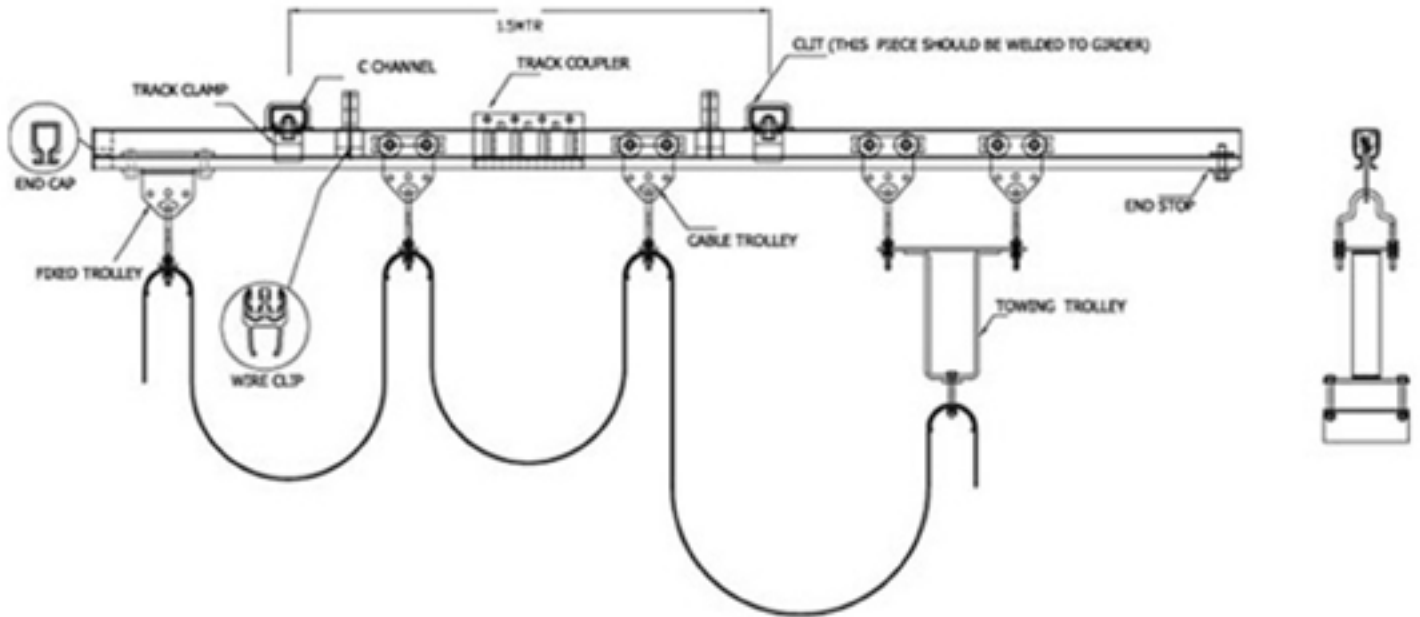

The main advantages of using our Festoon System are as follows:-

- Light in weight.
- Easy to install.
- Smooth movement less friction.
- Trolley weight is less.
- Life of cable increases as no unwanted twist turns are provided.
- In case of bearing failure trolley will never fall down.

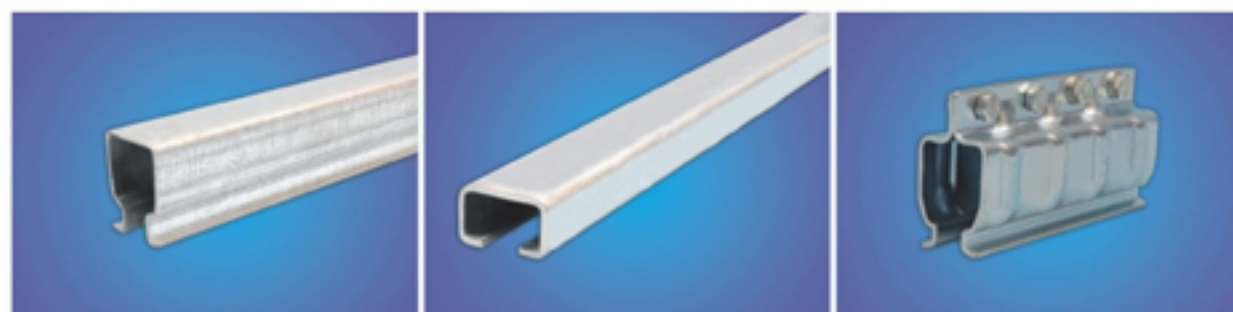

Silverline is one of the largest leading designer and manufacturer of Festoon Systems in india. We offer a comprehensive range of Cable Festoon System which are generally used on overhead cranes for transmission of power & control cables for cross bridge trolley travel. But they can also applied to crane runway travel.FESTOON SYSTEM which we provide is always according to the Reliability of that particular design of a crane or machinery including standard cranes and several others etc. Festoon Systems are particularly suitable for demanding environments, such as transfer cars, Monorails refuse cranes, waste water treatment machine & other material handling applications. The capacity of our Festoon System is up to 50 kg of cable /meter. Our plants are in Navi Mumbai, Aurangabad, and Dubai.

Advantages of using our Festoon System are as follows:-

- Trolley weight is less.
- Increment in the life of Cable as no unwanted twist turns are provided.
- In case of bearing failure trolley will never fall down.
- Light in weight.
- Installation is easy.
- Less friction due to smooth movement.
